The invention relates to a method for producing phytase that involves corporating a nucleic acid encoding phytase derived from a bacteria, and expressing the nucleic acid in a yeast under conditions that allow compression of the enzyme in the yeast. The invention also relates to modified phytase enzyme which has improved thermal tolerance and protease stability at low pH. The phytase enzyme can be used in foodstuffs to improve the feeding value of phytate rich ingredients, and in diet of commercous animals including mammals, fowls and fishes, commercially significant mammals such as pigs, goats, laboratory rodents, commercially commercially farmed fish such as guppy, zebrafish, molly, swordtail, commercially farmed fish such as guppy, zebrafish, molly, swordtail, composition, higher yields and loading efficiency. The phytase composition, higher yields and loading efficiency. The phytase concorporated in to the dietary aid is safe for animals. The present composition is Escherichia coli B phytase DNA.
                                                                                                                                                                                                                                                                                                                                                                                                                                          Short JM,

```
The invention relates to a method for producing phytase that involves CC providing a nucleic acid encoding phytase derived from a bacteria, and CC expressing the nucleic acid in a yeast under conditions that allow CC expression of the enzyme in the yeast. The invention also relates to CC modified phytase enzyme which has improved thermal tolerance and protease CC stability at low pH. The phytase enzyme can be used in foodstuffs to CC improve the feeding value of phytate rich ingredients, and in diet of CC numerous animals including mammals, fowls and fishes, commercially CC significant mammals such as pigs, goats, laboratory rodents, commercially CC significant avian species such as chicken, ducks, doves, parrot, etc., CC commercially farmed fish such as guppy, zebrafish, molly, swordtail, CC etc., in dough making and baking, in dietary aids for animals. The method CC provides easy manufacture of the active ingredient loaded biocompatible CC incorporated in to the dietary aid is safe for animals. The present CC sequence is Kangaroo rat Escherichia coli phytase mutant DNA. Note: The present sequence is not shown in the specification but has been derived from Escherichia coli B phytase DNA ADOS0291.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                         25-MAY-1999;

The invention relates to a method for producing phytase that involves CC providing a nucleic acid encoding phytase derived from a bacteria, and CC expressing the nucleic acid in a yeast under conditions that allow CC expression of the enzyme in the yeast. The invention also relates to CC modified phytase enzyme which has improved thermal tolerance and protease ctability at low pH. The phytase enzyme can be used in foodstuffs to CC improve the feeding value of phytase enzyme can be used in foodstuffs to CC improve that including mammals, fowls and fishes, commercially CC significant mammals such as pigs, goats, laboratory rodents, commercially CC significant mammals such as sigs, goats, laboratory rodents, commercially CC commercially farmed fish such as guppy, zebrafish, molly, swordtail, CC etc., in dough making and baking, in distary aids for animals. The method CC composition, higher yields and loading efficiency. The phytase CC incorporated in to the dietary aid is safe for animals. The present sequence is scherichia coli M phytase mutant DNA. Note: The present concerned is shown in the specification but has been derived from Excherichia coli B phytase DNA ADOS0291.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                        Query Match

No. is the number of results predicted by chance to have a score greater than or equal to the score of the result being printed, and is derived by analysis of the total score distribution.
